CSCI 578| Fall 2018 Team name: ***Seekers***

Impressive ACDC

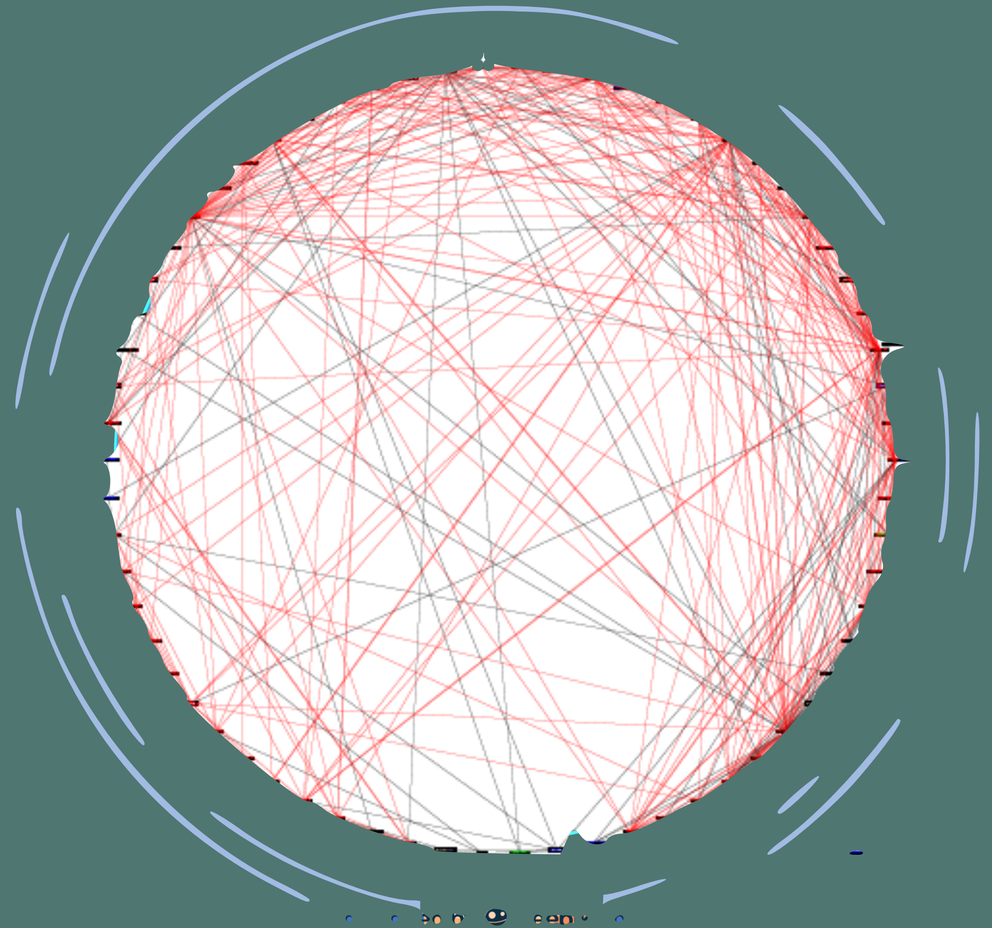
Interactive dependency view with D3

Haomo Tang | haomotan@usc.edu
Yiqing Xu | yiqingxu@usc.edu
Dong Yan | yandong@usc.edu
Tianyu Zhao | zhao254@usc.edu

Problem of Original Visualization

Components all look the same

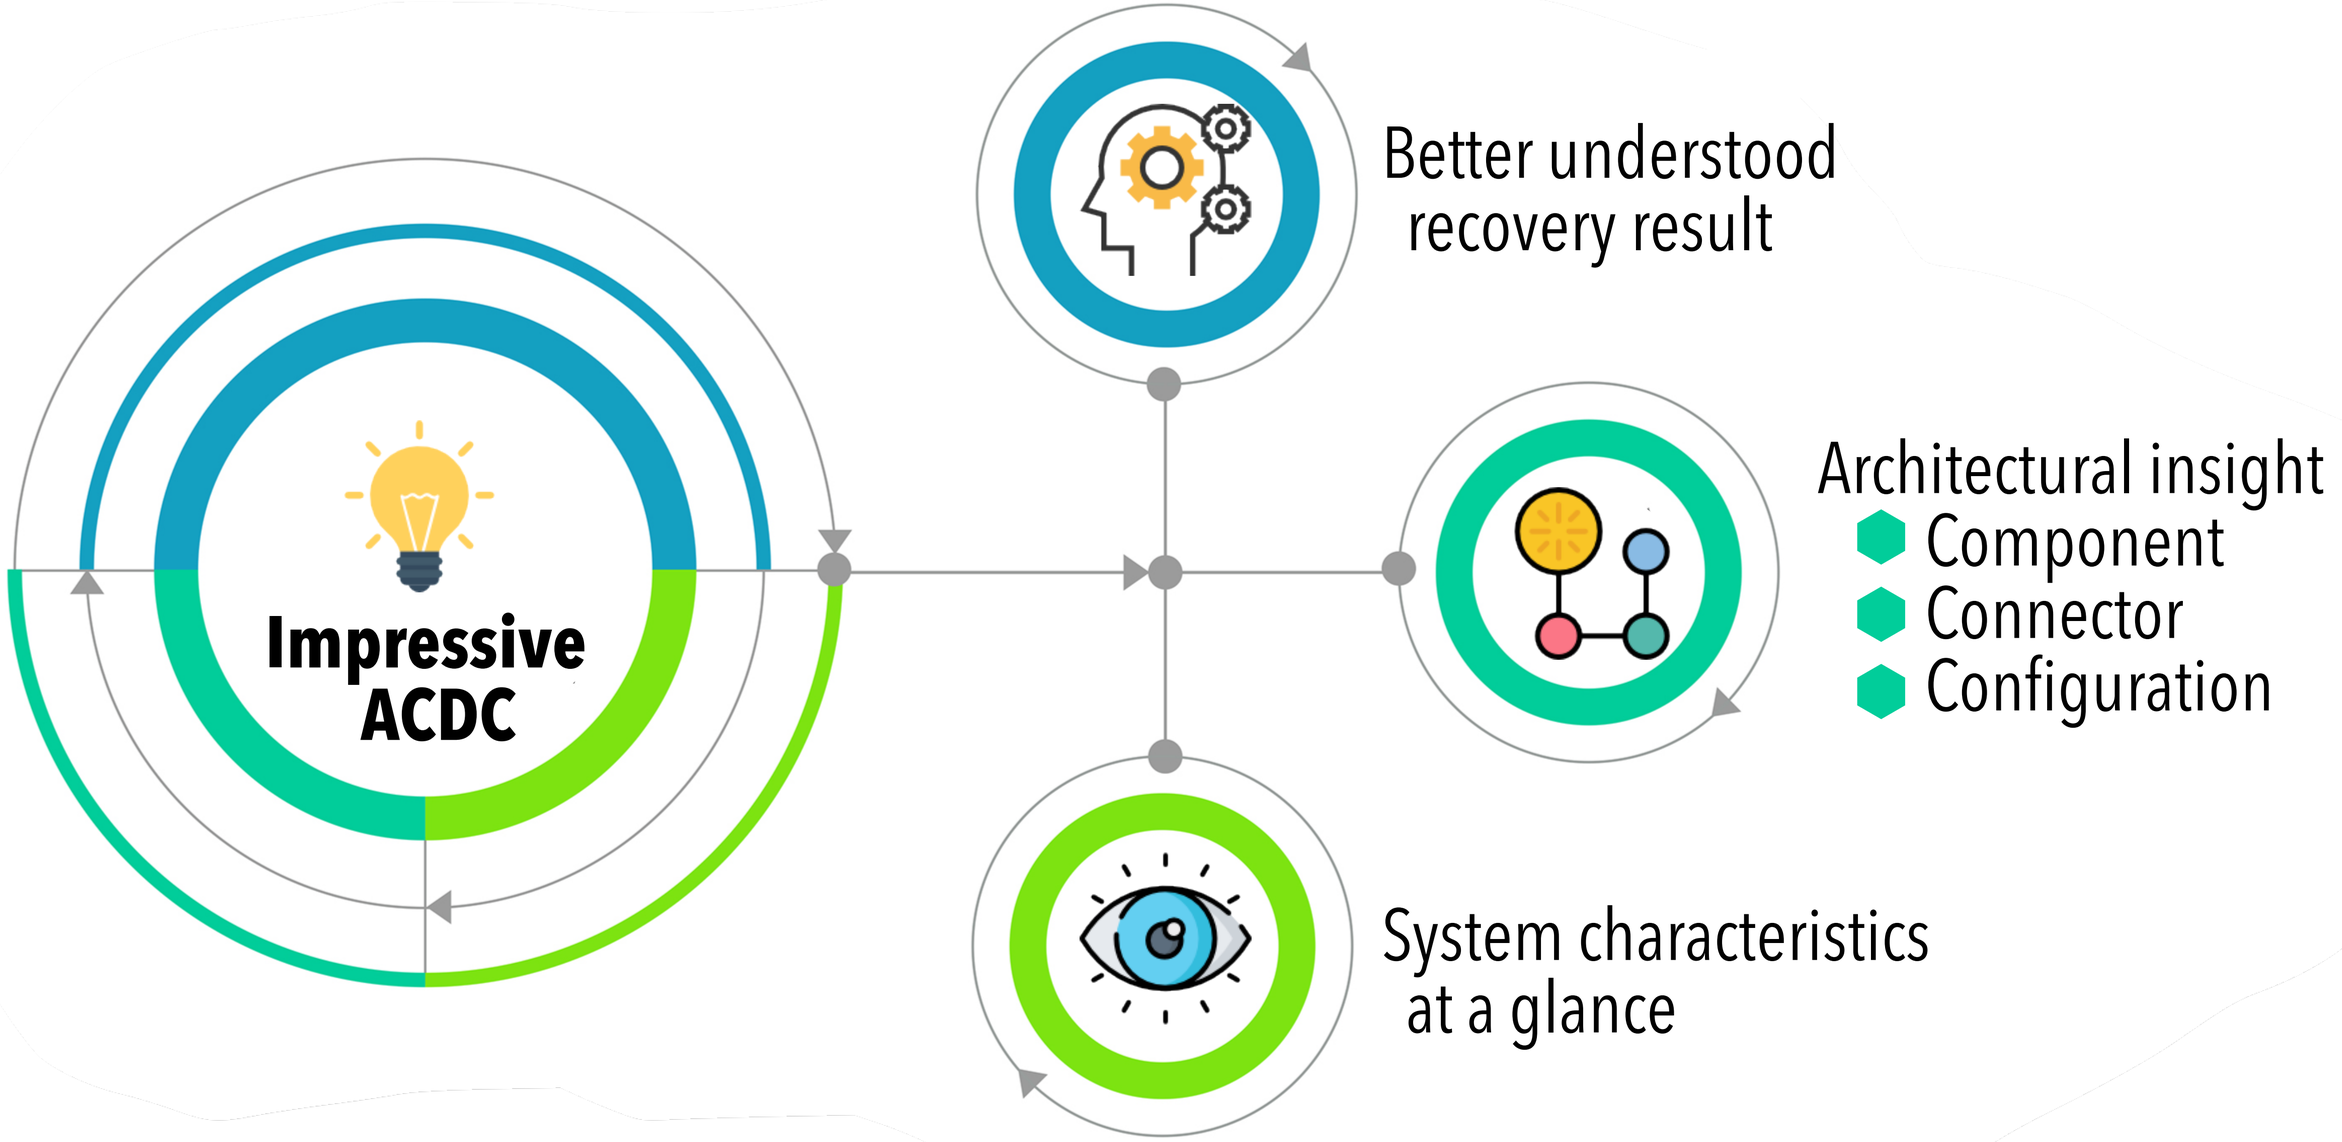
Too many points and lines



Unstructured hair ball effect

Hard to make sense of

Goal of Our Visualization



Design

Link strength

- Relationships are not equal
- Cluster size may effect strength

Component importance

- Clusters have different importance
- Show the difference

Component community

- Related components form communities
- Use force-directed graph

Cluster Dependency View

Cluster Dependency View

Component: Star

Dependency: Gravitational Force

Community: Star System

Cluster Dependency View

DEMO

Class Bubble Char

Functionality:

Understanding Component functionality through its classes

Class Size: Proportional to SLOC

Class colored: RELAX result

RELAX Radar Chart

Consistency:
Relative consistent view across different versions

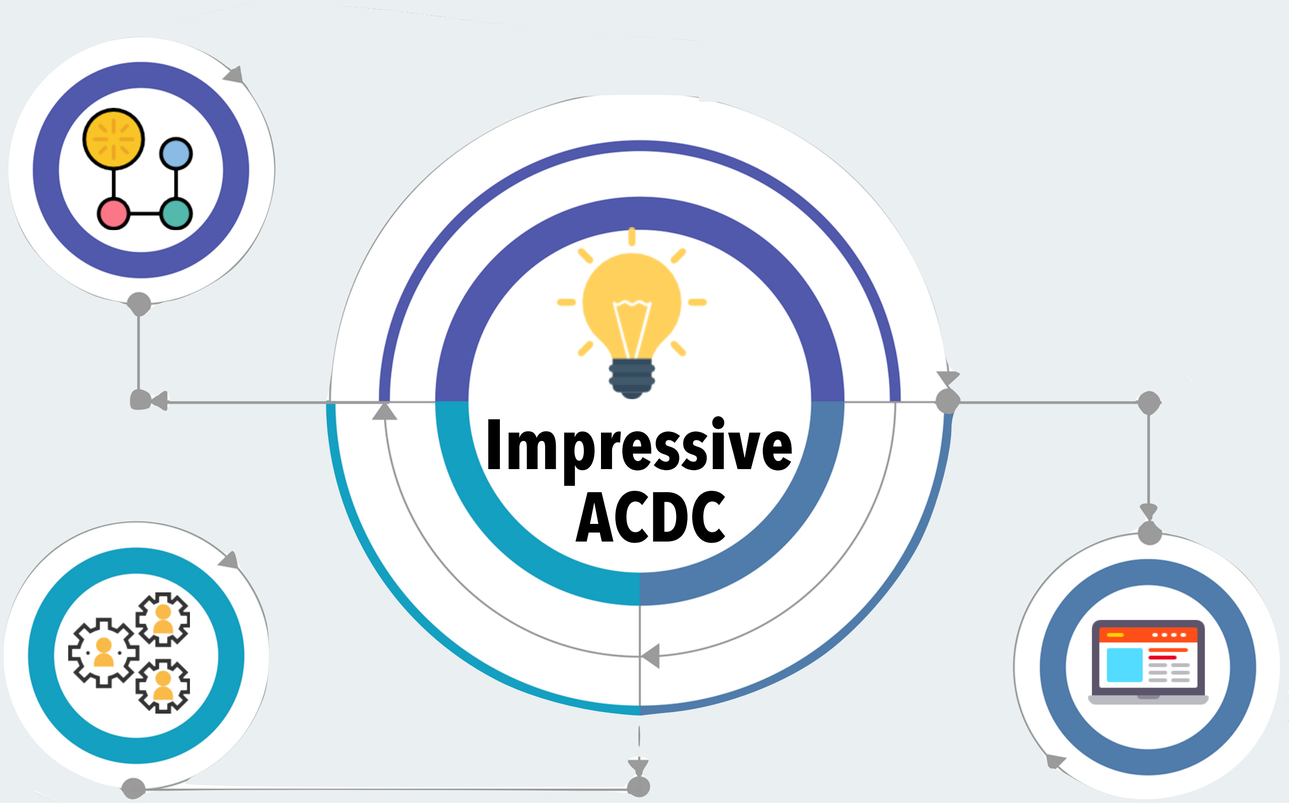
Color:
Component colored by majority vote of class labels

Comparison:
Useful for comparison between versions

Visualization Features

Further process ACDC result for deeper insight

Incorporate RELAX, ACDC, and UCC results



Can be used for recovery result on any system

Thank You
